Boom Sprayer Rate
10L per 200L of water
(strong) or 5L per 200L
of water (weak)

**Required Safety
Equipment**
Gloves, Face Shield
& Coveralls

Sapphire® is a professional biocide made up of a dynamic combination of anti-bacterial disinfectants for use on all external hard surfaces. It is the easiest and most effective way to treat and prevent mould, algae and grime.

Sapphire® has been developed specifically for those requiring an outdoor cleaner which covers larger areas. It will cover up to 5 times the area of other products such as MMC Pro & Algoclear. This is due partly to the strength of Sapphire, but also due to its special surfactant system which allows it to penetrate quicker and deeper than other brands. This makes it a perfect product for all hard surface cleaning and cleansing jobs. Sapphire® is compatible with weed killers such as glyphosate (although label tank mixes must be followed).

Sapphire® is The Professional's Choice hard surface outdoor cleaner.

KEY PRODUCT FEATURES/POINTS

- Safe to use as it is readily biodegradable and contains no bleach or acids.
- Available in pack sizes of 1L, 5L and 20L.
- Typically works in 2-4 days (depending on weather) it then continues to prevent re-growth for the following weeks & months.

OUR RECOMMENDATION

- For best results apply at the higher rate with plenty of water on a dry & sunny day.
- Mix in Blue Dye to ensure no areas are missed.

AREAS OF USE

APPLICATION

Sapphire® is easy to use with no power washing or scrubbing required, just dilute and apply as a spray. It can also be applied by brush or mop. It is essential that all areas treated with Sapphire are thoroughly wetted with the product. Application rate depends on the texture of the surface & how badly soiled it is. For heavy infestations, apply 1 litre of Sapphire in 20 litres of water to cover 100m². For maintenance applications, apply 500ml of Sapphire in 20 litres of water to cover 100m². Sapphire works on contact and continues to work for several weeks after application.

*Moss control may be coincidental

KS = Knapsack Sprayer BS = Boom Sprayer

In recent years, products which killed moss on hard surfaces have been classified in the UK as "biocides" and have been approved and controlled under the UK's biocides regulations. Now, due to recent changes, products that kill moss on hard surfaces have been re-classified by the EC as herbicides. Due to this, we are unable to claim that this product will control moss; In spite of the fact that the product formulation has not changed since when it was used to control moss with very good results
