

INTRODUCING **BIOLINE AGROSCIENCES'** ANDERLINE BUGLINE — EFFECTIVE RUSSET MITE AND SPIDER MITE CONTROL FOR PROTECTED OR OUTDOOR CROPS.

Anderline Bugline is a unique introduction system of release sachets. *Amblyseius andersoni* is a predatory mite that can be used in the control of a range of mite pests. This mite is ideal for vegetables, hardy ornamentals and fruit crops, controlling red or two-spotted spider mite, fruit-tree red spider mite, and russet mites. It is active at lower temperatures than other predatory mites, which means that it can be introduced much earlier in the growing season than some other predators. It is available in Bugline lengths of 100 m. Each unit contains six strips of Bugline, each strip has 1 in 6 cells filled with a breeding colony of *Amblyseius andersoni*.

WHY TRY **ANDERLINE BUGLING?**

- Treats many types of spider mite and other mite pests.
- For protected or outdoor crops.
- Long lasting controlled release sachet(CRS) maintains protection.
- Ideal for fruit trees and soft fruit crops.

| | DESCRIPTION | PRODUCT CODE |
|--|---|---|
|  | Specially designed to save eight-hours of manual labour per acre, the Anderline bugline is suited for crops that are grown in beds, rows or on a growing table. Implement the sachet trails on dry crops and place horizontally in the crop in case of overhead watering. | 6 x 100m sachet strips: P0016-05 |

GET TO KNOW ANDERLINE BUGLINE...

1

Amblyseius andersoni occurs naturally throughout Europe, including the UK and the Netherlands, and in North America.

2

They prey on spider mites of various species, but also feed on rust and russet mites.

3

They may enter diapause in late summer, but are active from early in the next season, as well as tolerating high temperatures, provided the atmosphere is suitably humid.

STORAGE AND HANDLING

1. KEEP OUT OF DIRECT SUNLIGHT
2. TRANSPORT AND STORE AT 10-15° C IN DARKNESS
3. USE WITHIN 18 HOURS OF RECEIPT

HOW TO USE

1. Anderline Bugline is available in strips of 100 metres. The end of the line can be hooked onto the spray gantry and the lines pulled over the crop. The logo side of the sachets should face upwards.
2. Do not hang adjacent to heating pipes
3. Introduce Anderline Bugline early in the crop/pest cycle to protect against pest build up.
